

Canvas peer parity notes (26.2)

Goal: beat stock Folia $\geq 5\%$ on fullcite **and** rank ahead of / competitive with Canvas using the **ship knob profile** (smart budget + microtick + subregion partition).

Ship cite profile

See `YAP_FOLIA_SOAK.md`. Result JSON must include `knob_*`. `YAP_MSPT_REQUIRE_SHIP_KNOBS=1` enforces `entity $\geq 400$` , `microtick $\geq 8$` , `partition=true`, `async=true`.

Peer heavypop ranking (ship knobs)

Stamp `20260904Tship0n` (hopper=64, entity=400, microtick=8, partition=true, async=true):

Rank	Label	mspt_mean
1	yap-folia-chassis	10.7830
2	stock-canvas	11.1986
3	stock-folia	11.6637

YaP vs stock Folia **-7.55%** (citeable). YaP vs Canvas **-3.85%** (ranked #1; within 5% noise vs Canvas — claim rank lead, not $\geq 5\%$ Canvas beat).

Baseline A/B (`20260904TshipBase` , smart knobs off): YaP **-7.19%** vs stock — async+hopper alone. Ship knobs add a small heavypop edge here (region MSPT ≈ 11 sits near the 12ms budget gate).

Fixtures: `src/test/resources/mspt/{stock-folia,yap-folia}-heavypop.json` , `peer-heavypop-canvas.json` .

Fullcite vs Canvas

Official stock vs Yap: **-12.4%** (`20260904TshipFc2` , ship knobs, `cite-fullcite-*.json`).

Peer ranking fixture `cite-fullcite-canvas.json` (from `20260904TshipFc` 3-way):

Rank	Label	mspt_mean
1	yap-folia-chassis	21.6583
2	stock-folia	24.7234
3	stock-canvas	35.3606

YaP leads both peers on fullcite under ship knobs. Canvas row is ranking-only (not the pairwise $\geq 5\%$ gate).

Port rules (Canvas bumps)

1. Preserve owning-region mutation.
2. ≤ 500 -line domain files under `threadedregions`.
3. Pass soak-compatible + `fuse_ticking_ok`.
