

YaP MMO Bedrock UI (M5)

Bedrock parity for the MMO stack via **FormService** forms and **BedrockUiBridge** action bar / scoreboard mirroring.

Plugins

Jar	Role
yap-bedrock-ui.jar	Registers <code>BedrockUiService</code> (chassis + Floodgate fallback)
yap-mmo-bedrock.jar	Skills panel, recipe/hiscore forms, XP + combat sidebar

Bedrock player UX

- `/skills` → Bedrock form hub (when `intercept-skills-command: true`)
- `/mmoui [skills|recipes|hiscores] [skill] [page]`
- Hub panels: **Skills** (per-skill detail), **Quests** (active objectives), **Abilities** spellbook, **Recipes / Hiscores** (skill picker → paginated list)
- Skill XP action bar mirrored via `SkillFeedbackBridge`
- Combat sidebar refreshed on join, level-up, and timer (`sidebar.refresh-ticks`)
- Cast feedback on Bedrock: action bar pulse from `AnimationSync` when abilities fire

Dependencies

`YaPSkills` , `YaPCombat` , `YaPCrafting` , `YaPMmoContent` (soft), `YaPNpcs` (soft, quests panel), `YaPAbilities` (soft), `YaPBedrockUI` , `YaPFloodgate` (soft).

Native YaPcore Bedrock sessions use chassis `FormService` + `BedrockUiBridge.pushActionBar` / `pushSidebar` . Link/Floodgate-only players use Paper action bar + scoreboard fallback.

Smoke

```
./gradle installGameplayDefaults
```
