

YaP MMO — RuneScape-style skills reference

Full skill set for the YaP MMO stack (`yap-skills` , `yap-combat` , `yap-crafting` , `yap-mmo-content`).

Skill list (13 skills)

Skill	XP sources	Plugin
Mining	Breaking ores/stone	yap-skills
Woodcutting	Breaking logs	yap-skills
Fishing	Catching fish	yap-skills
Cooking	Smelting/cooking at furnace	yap-skills
Smithing	Smelting bars, anvil smithing	yap-skills + yap-crafting
Crafting	Crafting table recipes	yap-crafting
Attack	Melee damage dealt	yap-combat
Strength	Melee damage dealt (shared)	yap-combat
Defence	Damage taken	yap-combat
Hitpoints	Combat XP ratio	yap-combat
Ranged	Bow/crossbow damage dealt	yap-combat
Magic	Spell cast + spell damage	yap-combat
Prayer	Prayer points drained while active	yap-combat

All skills use the shared RS-style XP table (`max-level: 99`) in `plugins/YaPSkills/config.yml` .

Combat styles

YaPCombat routes XP and accuracy by **combat style**:

Style	Trigger	Accuracy	Max hit	XP skills
Melee	Sword, axe, etc.	Attack + gear vs Defence	Strength + gear	Attack, Strength, Hitpoints
Ranged	Bow, crossbow, projectile	Ranged + gear vs Defence	Ranged + gear	Ranged, Hitpoints

Style	Trigger	Accuracy	Max hit	XP skills
Magic	/cast <spell>	Magic + gear vs Defence	Spell base + magic level	Magic, Hitpoints

Gear bonuses (`items.yml`) add to accuracy/max hit: `attack-bonus` , `strength-bonus` , `defence-bonus` , `ranged-bonus` , `magic-bonus` , `prayer-bonus` .

Spell book

Config: `plugins/YaPCombat/spells.yml`

Command	Description
/spells	List spells unlocked by your Magic level
/cast <id>	Cast at targeted entity (ray trace, 20 blocks)

Each spell defines:

- `min-magic-level` — level gate
- `prayer-cost` — prayer points consumed on cast
- `max-hit` — base spell damage (scaled by magic level)
- `cast-xp` — Magic XP on cast
- `runes` — inventory materials consumed per cast (e.g. `LAPIS_LAZULI: 1`)
- `required-staff` — optional staff/wand in main or off hand
- `target-filter` — e.g. `undead` for Crumble Undead

Default spells: `wind_strike` , `water_strike` , `fire_bolt` , `crumble` .

Prayer

Config: `plugins/YaPCombat/prayers.yml`

Command	Description
/prayer list	Prayers available at your Prayer level
/prayer on <id>	Activate a prayer (drains points each tick)
/prayer off [id]	Deactivate one or all prayers

Prayer points: max = Prayer level. Full restore on respawn. Partial restore via `GLISTERING_MELON_SLICE` (+30) and `GOLDEN_CARROT` (+15) in `food.yml` .

Prayer effects (wired into combat formulas):

Prayer	Effect
thick_skin	+5 Defence
burst_of_strength	+5 Strength
clarity_of_thought	+5 Attack
hawk_eye	+8 Ranged
mystic_might	+8 Magic
protect_from_melee	40% melee damage reduction
protect_from_missiles	40% ranged damage reduction
protect_from_magic	40% magic damage reduction

Only one prayer per **boost group** and one **overhead** (protect) at a time. `prayer-bonus` gear reduces drain rate (1% per bonus point).

Prayer XP: `xp-per-point` in `plugins/YaPSkills/skills/prayer.yml` (default 0.5 XP per point drained).

Ranged accuracy

Ranged uses a dedicated roll in `DamageCalculator.rollRanged()` :

```
effectiveRanged = rangedLevel + rangedBonus + boosts
maxHit = floor(effectiveRanged × levelFactor)
attackRoll = effectiveRanged + random(0..effectiveRanged)
defenceRoll = defenceLevel + defenceBonus + random(0..defence)
hit if attackRoll > defenceRoll
```

Projectiles (arrows) and bow/crossbow in hand use **Ranged** style automatically.

Skill YAML packs

One file per skill under `plugins/YaPSkills/skills/` :

```
# skills/ranged.yml
id: ranged
display: Ranged
icon: BOW
ranged-dealt:
  xp-per-damage: 2.0
  share: 1.0
```

```
# skills/magic.yml
magic-dealt:
  xp-per-damage: 2.0
  share: 1.0

# skills/prayer.yml
prayer-drain:
  xp-per-point: 0.5
```

Reload: `/yskills reload`

GUI

`/skills` opens a 54-slot menu showing all enabled skills plus **combat level** (OSRS-weighted formula including Ranged, Magic, and Prayer).

Combat level

```
base = 0.25 × (Defence + Hitpoints + floor(Prayer/2))
melee = 0.325 × (Attack + Strength)
ranged = 0.325 × (Ranged + floor(Ranged/2))
magic = 0.325 × (Magic + floor(Magic/2))
combatLevel = floor(base + max(melee, ranged, magic))
```

Implemented in `CombatLevelCalculator` (yap-mmo-api) and shown in `/skills` + PlaceholderAPI `%yapskills_combat_level%`.

Permissions

Node	Grants
<code>yapcombat.cast</code>	<code>/cast</code>
<code>yapcombat.prayer</code>	<code>/prayer</code>
<code>yapcombat.use</code>	<code>/combat</code> stats
<code>yapskills.use</code>	Gain XP, <code>/skills</code>

See [PERMISSIONS.md](#) for the full list.

Folia safety

All combat mutations (damage, spell cast, prayer drain) run on entity/region schedulers via `YapSched`. Prayer drain uses `GlobalRegionScheduler` timer with per-player `entity()` callbacks.
