

Plugin compatibility matrix (Phase 16)

Curated classification for **common third-party jars** on the YaPcore **Folia product path**. YaPcore does **not** promise to run arbitrary Paper plugins on Folia — this matrix gives operators clarity and dashboard warnings.

Machine-readable source: `src/main/resources/plugin-compat-matrix.json` (loaded by dashboard Plugins tab).

Status values

Status	Meaning
native	First-party YaP jar — use this
works	Known to work with Folia build or as API bridge
folia-build	Requires a Folia-specific fork — test on copy
broken	Do not install — use native alternative
unknown	Not classified — test on a copy

Native replacements (quick reference)

Common plugin	YaP native
LuckPerms	yap-perms.jar
EssentialsX	yap-essentials.jar
CoreProtect	yap-protect.jar
WorldEdit / FAWE	yap-world.jar + WorldEdit.jar shim (FAWE-class first-party; do not install stock WE/FAWE on Folia)
WorldGuard	yap-playerdata.jar (claims + flags)
Via* / Geyser / Floodgate	Built-in Phase 4 stack
Velocity	yap-link.jar
DiscordSRV	yap-discord.jar
Dynmap / BlueMap	yap-map.jar
TAB / NametagEdit	yap-tab.jar
Citizens	yap-playerdata.jar (NPC/quests)

Common plugin	YaP native
LiteBans / AdvancedBan	yap-moderation.jar
ChatControl / VentureChat	yap-chat.jar
Matrix / Vulcan AC	yap-guard.jar

Dashboard

Plugins tab shows **compat status** and **native alternative** badge per installed jar.
Warnings count appears on **Status** → **Network health**.

Matrix size

The JSON ships **≥50** classified plugins/patterns. Extend by adding entries to `plugin-compat-matrix.json` — no code change required for new rows.
