

Folia / Paper API coverage

Product path: under `game-authority=folia` (default), Folia owns the game. First-party plugins must declare `folia-supported: true` and schedule via `YapSched`. Stock Paper jars are **unsupported** (no PaperCompat).

Legacy Paper path: under `game-authority=paper`, YaPcore still embeds Paperclip for benches / Phase 3 opt-in. That is **not** the product default.

Path	Who owns Bukkit/Paper API	Stock Paper jars
Product (<code>game-authority=folia</code>)	Folia 26.2 + first-party Folia-native	No
Legacy (<code>game-authority=paper</code>)	Real Paper (<code>paper-api</code> 26.2)	Yes (benches)

Product surface

Area	Status
Folia region / entity / global / async schedulers	Full (via Folia + YapSched)
YaP Link modern forwarding	Full
Chassis Via* / Geyser dual-stack	Partial → Phase 4 DoD
<code>yap-spatial-tick</code>	Unsupported on Folia
Arbitrary Spigot/Paper ecosystem jars	Unsupported

Legacy Paper notes

When `game-authority=paper`, plugins get complete Paper API from the embedded Paperclip — same as stock Paper 26.2. Phase 3 spatial tick remains opt-in for benches only.

Runtime matrix: `com.yapcore.api.ApiCoverage`. Smoke: ·
