

Privacy Policy

Effective date: 1 September 2026

Last updated: 1 September 2026

This Privacy Policy describes how **YaPcore** (software maintained by **YapLabs** and contributors) relates to personal information. Read it together with [Terms of Use](#) and [Licensing](#).

Not legal advice. This document explains how the YaPcore *software* works with data. If you operate a **public Minecraft server** or a commercial service, you are responsible for your own privacy compliance. Consult qualified counsel for your jurisdiction.

1. Who this policy applies to

Role	What this policy covers
You download or build YaPcore	How the software may process data on your machine
You run a server for others	You are the data controller for your players — publish your own policy
You play on someone else's YaPcore server	That server operator's policy applies, not YapLabs

YapLabs provides open-source server software. We do **not** operate player accounts, host gameplay worlds for the public, or receive player data from your installation unless you separately contact us (e.g. via GitHub).

YaPcore is **not affiliated with Mojang Studios or Microsoft**. Minecraft is subject to [Mojang's policies](#) and the [Minecraft EULA](#).

2. Information the software may store locally

When you install and run YaPcore on hardware you control, the stack may read, write, or display data including:

2.1 Game and player data

Data	Typical location	Purpose
Minecraft username, UUID	World files, <code>plugins/YaPPlayerdata/</code> , MariaDB	Gameplay, sync, ranks
IP address	Server logs, moderation records, session lock	Security, bans, audit
Chat messages	Logs, <code>YaPChat</code> , moderation plugin	Chat, filters, staff tools
Inventory, location, stats	Playerdata / DB plugins	Progression, MMO, kits
Punishment history	<code>YaPModeration</code> , guard plugins	Bans, mutes, warnings

Retention is **controlled by you** (log rotation, DB backups, plugin config).

2.2 Operator and configuration data

Data	Typical location	Purpose
Dashboard access token	<code>config/server.properties</code>	Web admin authentication
Operator names (<code>ops=</code>)	<code>config/server.properties</code>	In-game admin
Rank / permission nodes	<code>plugins/YaPPerms/</code>	Access control
Server MOTD, rules	<code>plugins/YaPEssentials/</code>	Player-facing text

Protect `web-dashboard-token` and database credentials. Do not expose the web dashboard (`:8080`) to the internet without TLS and strong access controls — see [WEB_DASHBOARD.md](#) and [EDGE_HARDEN.md](#).

2.3 Diagnostics

Data	Typical location	Purpose
Console output	<code>logs/</code> , web dashboard console	Debugging
Crash dumps	<code>logs/crashes/</code>	Support (<code>crashdump</code> command)
Metrics (optional)	<code>/metrics</code> endpoint	Monitoring

3. Optional integrations (operator-enabled)

YaPcore can connect to services **you** configure. Each has its own privacy terms:

Integration	Examples of data sent	Operator action
MariaDB / YaPDB	Player sync rows, economy	You choose host & DPA
Tebex (optional)	Purchase events, UUID	TEBEX.md
Discord (<code>YaPDiscord</code>)	Chat relay, webhooks	Your bot token & Discord ToS
Grim AC (optional)	Movement / combat telemetry	GRIM.md
Public HTTP	Resource pack downloads	Access logs on your edge

YapLabs does not receive this data unless the third party or you share it with us.

4. Source repository and releases

If you use **GitHub**, **release zips**, or **issue trackers** to obtain YaPcore:

- GitHub may collect usage data under [GitHub's Privacy Statement](#).
 - We do not require an account to download GPLv3 source or release artifacts.
 - Contributions (issues, PRs) are public unless you use private channels you arrange separately.
-

5. Children's privacy

Minecraft is played by people of many ages. **Server operators** must comply with laws such as COPPA (US), GDPR (EU/UK), and similar rules when collecting personal information from children.

YaPcore software does not include age verification. If you run a server open to minors:

- Publish a clear privacy policy on your server website or `/rules`.
 - Obtain parental consent where required.
 - Minimize collection (avoid storing IP longer than needed, restrict public chat logs).
-

6. Security recommendations for operators

1. Keep `web-dashboard-localhost-only=true` unless you need remote admin access.
2. Rotate `web-dashboard-token` after staff changes.
3. Use strong MariaDB passwords and firewall database ports.
4. Restrict who has OP, `yapadmin.menu`, and dashboard access.
5. Review [EDGE_HARDEN.md](#) before exposing ports publicly.

7. Your rights (players)

If you play on a **third-party** YaPcore server, contact that **server owner** to:

- Access or delete data they hold about you
- Opt out of optional features (Discord linking, analytics, etc.)

YapLabs cannot fulfill player data requests for servers we do not operate.

8. Changes to this policy

We may update this document when YaPcore features change. The **Last updated** date at the top will change. Material changes will be noted in the project changelog or release notes.

Continued use of YaPcore after an update constitutes acceptance of the revised policy for **software download and documentation** purposes. Server operators remain responsible for notifying **their** players separately.

9. Contact

- **Project / documentation:** open a GitHub issue in the YaPcore repository
 - **Licensing:** [LICENSING.md](#)
 - **Terms:** [Terms of Use](#)
-

10. Template for public server operators

You may adapt the following for your server website (replace bracketed text):

Privacy Policy — [Your Server Name]

We operate a Minecraft server using YaPcore software. We collect [usernames, UUIDs, IP addresses, chat logs, ...] to provide gameplay, prevent abuse, and enforce rules. Data is stored on [our VPS / dedicated host] for [retention period]. We use [Tebex / Discord / none] for [payments / community]. Contact [your email] for data requests or deletion. We do not sell personal information. Minors: [your policy].

This template is **not** legal advice.
