

YaPAdmin — in-game staff super menu

Chest GUI hub for on-server staff. Complements the [web dashboard](#) and desktop Control Panel; it does **not** replace them.

Install

Built as `yap-admin.jar` (CORE + NETWORK product default).

```
gradle :admin-plugin:installIntoPlugins
```

Soft-depends on YaPEssentials, YaPModeration, YaPPerms, YaPWorld, YaPStacker, YaPPlayerData, YaPSkills, YaPCombat, YaPMMO — tiles hide when a plugin is missing.

Commands

Command	Permission	Description
<code>/yapadmin</code> <code>/staff</code> <code>/adminmenu</code> <code>/am</code>	<code>yapadmin.menu</code>	Open the hub
<code>/yapadmin reload</code>	<code>yapadmin.server</code>	Reload <code>plugins/YaPAdmin/config.yml</code>

Hub sections

- **Players** — online picker → TP to/here/spawn, freeze, invsee/echest, heal/feed/clear, promote/demote, kick/warn/mute 1h/tempban 1d, jump to Give
- **Self tools** — fly, god, vanish, heal, feed, socialspy, night vision
- **Give** — curated presets, kits (`/kit give`), paginated material browser (categories + amount 1/16/64)
- **Moderation** — same player picker (actions gated by `yapmod.*`)
- **Server** — broadcast presets, status (online/worlds/TPS), deep-link to Ranks GUI
- **Economy** — money grants via `/yapmmo givemoney` (when YaPMMO present)
- **Deep links** — `/yapperm gui` , `/yapworld gui` , `/yapstacker gui` , `/menu`
- **Combat / Skills** — `/skills` , heal, `/prayer list`

Permissions

Node	Default	Notes
<code>yapadmin.menu</code>	op	Open hub
<code>yapadmin.give</code>	op	Presets / materials / kits section

Node	Default	Notes
yapadmin.server	op	Broadcast + reload
yapadmin.economy	op	Money grants

Per-action nodes from other plugins still apply (`yapessentials.teleport` , `yapmod.kick` , `yapdata.kit.give` , ...). Grant `yapadmin.menu` (and `give/server` as needed) on `mod` / `admin` ranks.

Config

`plugins/YaPAdmin/config.yml` — kit ids, money amounts, broadcast presets, curated item presets.

Folia

Teleports and inventory mutations use `YapSched.entity` . Moderation DB calls go through `ModerationService` then hop back to the entity thread for feedback.
