

Plugin back-compat (1.20-1.21 → Paper 26.2)

YaPcore ships **Tier A + light B** support so many Paper plugins built for **1.20-1.21** can run on product **Paper 26.2**.

This is **not** Via (clients). It is **not** a promise that every old jar works (especially deep NMS). See also [PAPER_API_COVERAGE.md](#) and [PLUGIN_COMPAT.md](#).

What we rewrite (before Paper loads)

On boot (`plugin-compat-enabled=true` , default), YaPcore scans `plugins/*.jar` and ASM-rewrites:

Kind	Examples
Enchantment fields	<code>DAMAGE_ALL</code> → <code>SHARPNESS</code> , <code>DIG_SPEED</code> → <code>EFFICIENCY</code> , ...
PotionEffectType fields	<code>SLOW</code> → <code>SLOWNESS</code> , <code>HEAL</code> → <code>INSTANT_HEALTH</code> , ...
Particle fields	<code>REDSTONE</code> → <code>DUST</code> , <code>BLOCK_CRACK</code> → <code>BLOCK</code> , ...
CraftBukkit packages	<code>org.bukkit.craftbukkit.v1_20_R3.*</code> → <code>org.bukkit.craftbukkit.*</code>

Skipped: `yap-*.jar` , spatial tick, compat smoke, this compat plugin itself.

Backups (when `plugin-compat-backup=true`): `plugins/.yap-plugin-compat-backup/` .

Config (`config/server.properties`)

```
plugin-compat-enabled=true
plugin-compat-rewrite=true
plugin-compat-backup=true
```

Runtime plugin

`plugins/yap-plugin-compat.jar` (shipped by default) — `/yapcompat` status. Load order: `STARTUP` .

Limits

- Won't fix Folia-only plugins.
- Won't invent removed gameplay APIs (complex enchantment damage helpers, etc.).
- Version-pinned reflection into Mojang intermediary may still break — same as Paper.

- Re-copying an old jar over a rewritten one re-triggers rewrite on next boot.

Verify

```
gradle test --tests com.yapcore.plugincompat.PluginCompatRewriterTest
> **Retired (Folia product path):** Paperclip / Phase 3 vendor scripts (`vendor-paper.sh`,
`build-vendor-paper.sh`, `apply-yap-paper-hooks.sh`, `smoke-paper-plugins.sh`, `verify-paper-
api-coverage.sh`, Paper Phase 3 benches) were removed. Use `./scripts/fetch-folia.sh` and
`./scripts/build-yap-folia.sh` instead.
```
