

YaPProtect — product-complete scope

Folia-safe block/container audit log with rollback and restore. Not a full CoreProtect clone.

In scope (ship)

Capability	Commands / UI
Log block break/place	<code>logging</code> + <code>log-blocks</code> in config
Log container inventory	<code>log-containers</code>
Lookup by user / block / radius / time	<code>/yapprotect lookup ...</code>
Rollback by id, radius, time, or user+window	<code>/yapprotect rollback ...</code>
Restore (inverse of rollback) by id, time, or user+window	<code>/yapprotect restore ...</code>
Prune old rows	<code>/yapprotect prune [days]</code>
Dashboard	Protect tab: settings, user/radius lookup, rollback/restore

Aliases: `/co`, `/coreprotect` → `/yapprotect`.

Explicitly out of scope (Wave 1)

- Inspect wand / “near” interactive pick UI ecosystem
- Entity kill logging depth beyond configured change types
- Full CoreProtect consumer API parity

Ops examples

```
/yapprotect lookup user Notch 50 1d
/yapprotect rollback user Notch 1h
/yapprotect restore user Notch 1h
/yapprotect rollback radius 32 30m
/yapprotect restore 1842 1843
```

Dashboard: **Protect** tab → lookup user or radius → row Rollback/Restore, or user+duration actions.
