

YaP Stacker

First-party **VortexStacker-class** mob / item / spawner stacker for YaPcore / **YaP-Folia 26.2** (`folia-supported: true`). Shipped as `plugins/yap-stacker.jar` (**GAMEPLAY** opt-in: `gradle installGameplayDefaults` or `assembleRelease -PyapGameplay=true`).

Design: stack sizes live in Bukkit **PersistentDataContainer** (PDC) on entities, item meta, and spawner tile states — **no NMS**, so it stays stable across Folia updates.

Not a YaP modules/ jar. Runtime is a normal Folia-aware plugin (`plugin.yml`). A thin provides: `[stacker]` packaging module is optional later; v1 does not need one.

Commands

`/yapstacker` (alias `stacker`) — permission `yapstacker.admin` (op):

```
/yapstacker status
/yapstacker reload
/yapstacker gui
/yapstacker stats
/yapstacker give <wand|tool|aura> [player]
```

Permission	Default	Role
<code>yapstacker.admin</code>	op	Full admin
<code>yapstacker.gui</code>	op	Open admin chest GUI
<code>yapstacker.give</code>	op	Give tools
<code>yapstacker.wand</code>	op	Spawner wand
<code>yapstacker.tool</code>	op	Mob stack tool
<code>yapstacker.aura</code>	op	Kill-aura item

Features

Area	Behavior
Mobs	Same-type merge on spawn; nametag <code>{type} x{size}</code> ; sheep color / slime size / age gates
Kill modes	<code>DECREMENT</code> (default) — kill one, respawn stack-1 · <code>INSTANT</code> — multiply loot/XP
Per-mob rules	<code>mob-rules</code> — max stack, loot/XP multipliers, slime preserve, sheep color

Area	Behavior
Items	Ground-item merge; PDC for counts above vanilla max; full pickup
Spawners	Place-merge, break-one (sneak = whole stack), wand GUI / absorb nearby
Tools	Wand (spawners), tool (force-merge mobs), kill aura (held item pulses)
Remerge	Chunk <code>EntitiesLoadEvent</code> + periodic wander merge
Hooks	Soft-skip Citizens NPCs + MythicMobs (<code>softdepend</code>)
PlaceholderAPI	<code>%yapstacker_%</code> when <code>yap-placeholderapi</code> is present
Metrics	In-process counters via <code>/yapstacker stats</code> and admin GUI

Config

`plugins/YaPStacker/config.yml` (created on first enable). Defaults:

- Mobs: merge radius `5` , max stack `100` , kill mode `DECREMENT`
- Items / spawners: enabled with their own radii and caps
- Blacklist: dragon, wither, warden, elder guardian
- Skip named / tamed / leashed by default

Rebuild / install:

```
gradle :stacker-plugin:installIntoPlugins
# or full product defaults
gradle shadowJar
```

Placeholders (`%yapstacker_<id>%`)

Id	Value
<code>enabled</code>	Global enable
<code>kill_mode</code>	<code>DECREMENT</code> / <code>INSTANT</code>
<code>mob_merges</code> / <code>merges</code>	Merge counter
<code>mob_kills</code> / <code>kills</code>	Stacked death handling counter
<code>item_merges</code>	Item merges
<code>spawner_stacks</code> / <code>spawners</code>	Spawner stack ops
<code>aura_kills</code>	Kill-aura pulses
<code>max_stack</code>	Global mob max

Id	Value
merge_radius	Mob merge radius

Manual test checklist

1. Spawn eggs → zombies merge → nametag `Zombie xN`
2. Kill once → stack decreases by 1, 1× loot (`DECREMENT`)
3. Drop many diamonds → one ground stack with count nametag when over 64
4. Place spawners of same type nearby → absorb; wand right-click opens GUI
5. `/yapstacker give aura` → hold near stacked mobs → units die one-by-one
